

# 6 STEPS TO YOUR DREAM HOME

## 1 LAND & SITE ANALYSIS

No other piece of land is just like yours. Each site offers unique attributes that define your future home's relationship with its environment. This is why our process always starts with your land.

*"We take pride in designing each home to mold seamlessly with its site. We maximize each site's best qualities and help minimize any flaws."*

## 2 CUSTOM DESIGN

After we have analyzed your site and have had extensive discussions with you, our Architects bring your home to life as a concept sketch accompanied by a cost estimate.

*"Our expertise lies in bringing each client's unique vision to life through the most extraordinary designs."*

## 3

## PLANNING & PRICING

It's important to understand the cost of your house fully before you begin construction. Throughout the project, we give updated comprehensive estimates to minimize any surprises.

*"We strive to understand your budget, wants and needs in order to create your perfect home."*

## 6 AFTER CARE & OWNER SERVICES

We will continue to support your investment long after you have moved into your beautiful, new home. With your house plans safely stored in our archives for reference, we will be here to help you renovate and enhance your home for years to come.

*"Unlike other companies, we don't leave you after construction. We're happy to provide information, update ideas and replacement parts long after you've moved in."*

## 5

## CONSTRUCTION

After being fabricated in our factory, we ship your Acorn Deck House Component Package to be assembled and finished by your builder on site.

*"Your builder follows our plans to assemble each provided component into a weather-tight shell. He will then make sure your home is finished just how you envisioned."*

## 4 PANELIZATION & FABRICATION

Construction drawings are digitally broken down and labeled into individual components. These components are manufactured in the optimal conditions of our climate-controlled indoor environment.

*"Our craftsmen have years of experience in producing the highest quality components to complete your custom home."*
